

# EXERCISE AS MEDICINE FOR WOMEN'S HEALTH

## DEFINITION

**EXERCISE MEDICINE IS AN IMPORTANT TOOL USED TO SUPPORT WOMEN'S HEALTH THROUGH ALL STAGES OF LIFE (FROM MENSES TO MENOPAUSE). SPECIFIC PRESCRIPTION FOR PCOS, ENDOMETRIOSIS AND CHRONIC PELVIC PAIN CAN BE USED TO SUPPORT BOTH PHYSICAL AND EMOTIONAL WELLBEING, REDUCE PAIN AND IMPROVE OVERALL QUALITY OF LIFE. PRESCRIPTION DURING AND POST PREGNANCY SUPPORTS THE HEALTHY GROWTH OF A BABY AND PROMOTE RECOVERY POST BIRTH.**

## THE ROLE OF EXERCISE AS MEDICINE

*Years of dedicated research has led to effective exercise medicine prescription for many chronic conditions. Adherence, capacity for work and motivation are all crucial elements in the successful treatment of **WOMEN'S HEALTH ISSUES**. Our gold standard prescription to ensure exercise medicine adherence, increased motivation and work capacity is three sessions a week.*

## Why Chronic Care Australia?

### CHRONIC DISEASE TRIAGE

Individual pathologies and treatment schedule reviewed in line with the clinical referral. Recommendations made for coordinated allied health team care treatment, and referrer response regarding treatment plan and expected program outcomes.

### PRESCRIPTION, PROGRAM DESIGN & PLANNING

Chronic Care Australia has a unique system of care that ensures better outcomes and prevents disease. We have developed a clinically proven prescription that effectively treats Australia's top eight mental and physical chronic conditions.

### PATIENT MONITORING & PROGRESSION

Clients are routinely monitored and observed: Daily mental and physical presentation is assessed prior to each session. Appearance, heart rate, blood pressure, blood sugar levels, FEV, mood/mindset, fatigue/energy levels, RPE, sleep quality are assessed via a short pre-admission survey.

## Specific exercise medicine outcomes

Whole person healthcare. Consistent observation and monitoring of symptoms and health indicators.

Prescription adaptable to daily presentation. Greater adherence to exercise medicine prescription when flare-ups arise.

Greater awareness of posture and specific muscle activation. Less pelvic pain and improved bladder function.

Improved circulation and systemic benefits. Improved capacity and perceived outcomes when performing cardiovascular intervals.

Improved strength and range of motion. Better recovery post surgery.

Improved gait, posture, mobility and confidence to engage in incidental exercise and activities.

Improved psychological profile including reduced symptoms for depression, anxiety and PTSD. Reduced menopause symptoms.

## EXERCISE AS MEDICINE FOR THE PREVENTION, MANAGEMENT AND TREATMENT OF CHRONIC ILLNESS & INJURY

**50%** of all Australians have at least one chronic condition. Currently mental and physical conditions are treated in isolation to each other both at primary care and specialist health care levels.

At Chronic Care Australia we work with our referring GPs and specialists to treat, manage, prevent and monitor the mental and physical elements of patients conditions.

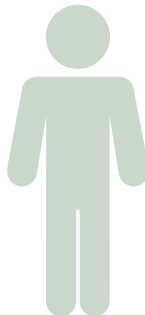

*“Exercise as medicine is the cheapest clinically proven medicine that over 50% of the population don’t take. The other 50% who do meet the World Health Organisations guidelines for activity could better protect themselves against chronic illness with the correct dose of exercise medicine to meet their genetic and lifestyle induced risk factors”.*

KATIE STEWART BHMS ESSAM  
MANAGING DIRECTOR & CO-FOUNDER  
CHRONIC CARE AUSTRALIA & THE EXERCISE THERAPIST

Chronic Care Australia is committed to reducing the burden of chronic disease in our communities.

Over the past three years we have developed and validated an exercise medicine prescription and delivery system that successfully treats, manages and prevents mental and physical illnesses at the same time.
